Keyboard shortcuts Most browsers support jumping to specific links by typing keys defined on the web site. On Windows, you can press ALT + an access key ; on Macintosh, you can press Control + an access key . In this website the following keyboard shortcuts are defined: access key 1 - link to home page access key 2 - skip to main content access key 4 - search box access key 9 - feedback and helpdesk access key 0 - link to accessibility statement (this page) Standards compliance the Web Content Accessibility Guidelines 1.0 priority 2 (WAI-AA) all pages validate XHTML 1.0 Transitional the Cascading Style Sheets respect the CSS2 Specification Navigation aids the breadcrumb trail - links to all parent folders from the current location to the root a link to skip over the navigation area (access key 2) in order to faster reach the main content in text-browsers and speech synthesizers (the link is invisible in visual browsers and it does not affect the graphic layout) the website is provided with a search engine (access key 4) the navigation for the regular end-users does not imply opening of pop-ups windows (note that some of the administrative pages with more complex functionality do) and the return to the previous page can be easily done through the back button from the browser Links many links have title attributes which describe the link in detail links' names make sense out of context the links' color is chosen to contrast sufficiently with the background color, and they are distinguishable by having a different text-decoration visited links and active ones are marked with different colors Images all content images used in the website include descriptive ALT attributes purely decorative graphics include null ALT attributes so they will not be interpreted by speech synthesizers Visual design this website uses cascading style sheets (CSS and CSS2) for visual layout only relative font sizes are used, compatible with the user-specified "text size" option in visual browsers the website uses color safely. The pages layout is designed in web safe colors if your browser or browsing device used does not support stylesheets at all, the content of each page is still readable and comprehensible Content structure and other specific elements The HTML code of every page starts with the appropriate DOCTYPE declaration: <!DOCTYPE html
